

Modern Software Application Development on AWS

Develop & Modernize Your Software Application

By today's standards, true modern software applications are cloud-native with capabilities to serve millions of users, have global availability, handle incredible amounts of data, and deliver near-instant response times. Yet many companies struggle to build modern software applications in the cloud due to the lack of technical expertise and skillsets to utilize and manage the technology necessary to develop them.

Mission is an AWS Premier Tier Services Partner that offers cloud-native software application development and modernization services that boost innovation, reduce costs, accelerate time to market, and increase performance and reliability. With over 150 years of combined software engineering experience, our team of AWS-certified Solutions Architects and expert software engineers can help you design, build, deploy and maintain modern software applications on AWS.

Modern Software Application Development Service Offerings

Our engineering capabilities combined with our proven agile delivery process provide you with modern, performance-driven, reliable, and scalable custom software application solutions. Whether you are an entrepreneur that's just getting started or an established enterprise, Mission can bring your software application initiatives of sizes and complexities to life.

About Mission

Mission Cloud Services is a leading AWS Premier Tier Services Partner and Cloud Managed Services Provider. Through its dedicated team of expert cloud operations professionals, cloud analysts, and solutions architects, Mission delivers a comprehensive and differentiated suite of agile cloud services designed to help businesses migrate, manage, modernize and optimize their AWS cloud environments, facilitating continuous improvement and delivery across your entire cloud journey.

Modernization & Refactoring

The aging of your application's code over time is inevitable, which is why replacing or refactoring is necessary to avoid performance, reliability, and functionality issues. Mission provides you with all the necessary skills and expertise for your software modernization projects. After evaluating your current needs, our software engineers modernize your legacy application by retrofitting or removing and replacing parts of its obsolete codebase and align it to cloud-native architecture best practices.

Software Development

Perhaps you have a novel idea for a mobile application or find yourself in the middle of building new enterprise software and need additional help to bring it across the finish line. Whether you are looking for a full project team or an extension to your existing team, Mission is ready to work with you to overcome any challenges in developing software and applications. Our capabilities and expertise in greenfield application development provide you with everything that you need to execute best-in-class software for your business.

Benefits of Modern Software Application Development with Mission

Certified AWS Expertise

As an AWS Premier Tier Services Provider, Mission focuses exclusively on AWS. Our AWS-certified Solutions Architects and software engineers demonstrate an expert level of proficiency in AWS' extensive portfolio of modern software application development tools and resources.

Access to Highly-Skilled Talent

Resolve software application development challenges with our team of experts for a fraction of the cost of building an in-house team. Our language-agnostic software engineers provide the highest level of professional software application development services available.

Design & Build Intelligently

Mission helps application development teams work smarter, faster, and more efficiently to modernize their applications on AWS to realize the benefits of increased reliability and performance, improved efficiency, and optimized cloud spend.

Accelerate Innovation

Our agile and iterative service delivery model and efficient development processes honed over years of delivering successful software application development projects lend to reduced timelines in releasing new products and features.

Modern Application Development Case Study

Hi There Solutions

Hi There Solutions LLC is a startup company that develops powerful mobile application solutions aimed at improving communication for the D(d)eaf and Hard of Hearing. The company sought an expert AWS services provider to manage its complex backend cloud infrastructure and implement all requisite API integrations to launch its latest apps.

By partnering with Mission, Hi There Solutions successfully launched its award-winning mobile applications to a global audience, with accuracy and uptime that far outperforms alternatives. Mission continues to manage the AWS cloud infrastructure powering Hi There Solutions' real-time captioning, speech-to-text, text-to-speech, instant messaging, and animated American Sign Language emojis capabilities during video calls or in-person conversations.

“

I would absolutely recommend Mission based on their remarkable responsiveness, creativity, forethought, and the seamlessness working together with us and our frontend development firm, KiwiTech. Building Hi There Solutions continues to be an exciting journey, and we're thrilled to have Mission as our partner."

Chase Prieve, Founder
